Dr. Claire J. Graham,

In the fall of 2005, I began the graduate program at Framingham State College in Curriculum and Instructional Technology. The classes gave me a much better understanding of the role of technology in the classroom and provided me with opportunities to try things I never thought I would be able to do.

I have taught ninth grade English, ninth grade physical science, and tenth grade biology/AP biology in the last six years. Since beginning this program, I have incorporated nearly everything I have learned in my graduate classes to help students learn in more creative and effective ways. I have become a better teacher, and my students now are able to understand and retain the concepts because I am able to use a variety of methods to teach them.

The portfolio can be found at [www.sciencefreaks.com/portfolio.shtml](http://www.sciencefreaks.com/portfolio.shtml). I have included activities from all the classes I have taught to show the variety of ways technology can be used to enhance instruction. Thank you for taking the time to evaluate it and for all the help and guidance you have provided as I have completed this program.

Sincerely,

Brianna Abraham
